

[HM] - Recording a Demo

Recording a demo is really easy to do, below will show the steps on how you correctly do so... Use everything you have been taught in training; feel free to ask another Hack Mod (preferably higher level, or Clan Leader) if unsure about anything!

(do not include the '<' '>' symbols when running a command)

1. Go in spectate mode (either **dead** or **spec**) to view the cheater/hacker
2. Open up the in game console (press ` button below Esc)
3. Start to record your demo by typing 'record <player name>'
4. Type 'sb_status' in console (verify's that the steamID and demo match, and that both are genuine)
5. Get a **good** capture of the cheater cheating (using their hacks) - must be obviously hacking
6. Type 'stop' to stop recording the demo

All demos are located in your 'C:\Valve\Steam\SteamApps\<username>\condition zero\czero' directory
